

Tevatron BPM Upgrade

Stephen Wolbers

CD Accelerator Coordination
Meeting

September 21, 2004

Outline of this talk

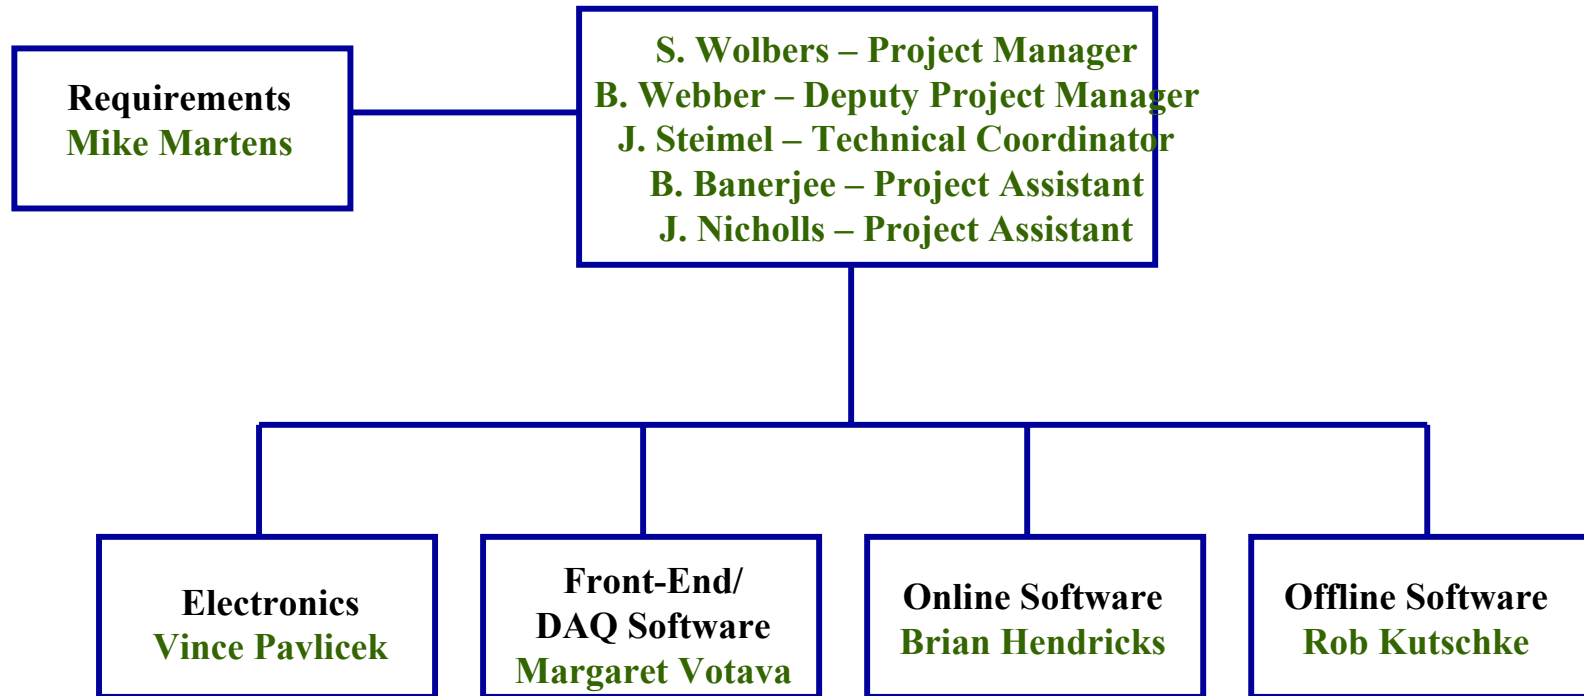

- Introduction (last update was 8/3/04)
- Recent accomplishments
- Schedule
- Issues and concerns
- Summary

Reminder: What is to be delivered by the TeV BPM Upgrade project?

- All new electronics.
- Front-end software.
- Data to the online/controls system.
- Mods to applications to use the new data.
- The pickups in the accelerator will not be modified!

Tev BPM Upgrade Project Organization (no changes)

Project Planning - Cost

- Updated Totals (not including overhead and contingency)
 - M&S: \$1.76 Million (Same as December 2003 estimate)
 - SWF: \$1.41 Million < - Rising as the project time stretches
 - Combination of CD and AD effort, costed to their respective organizations.

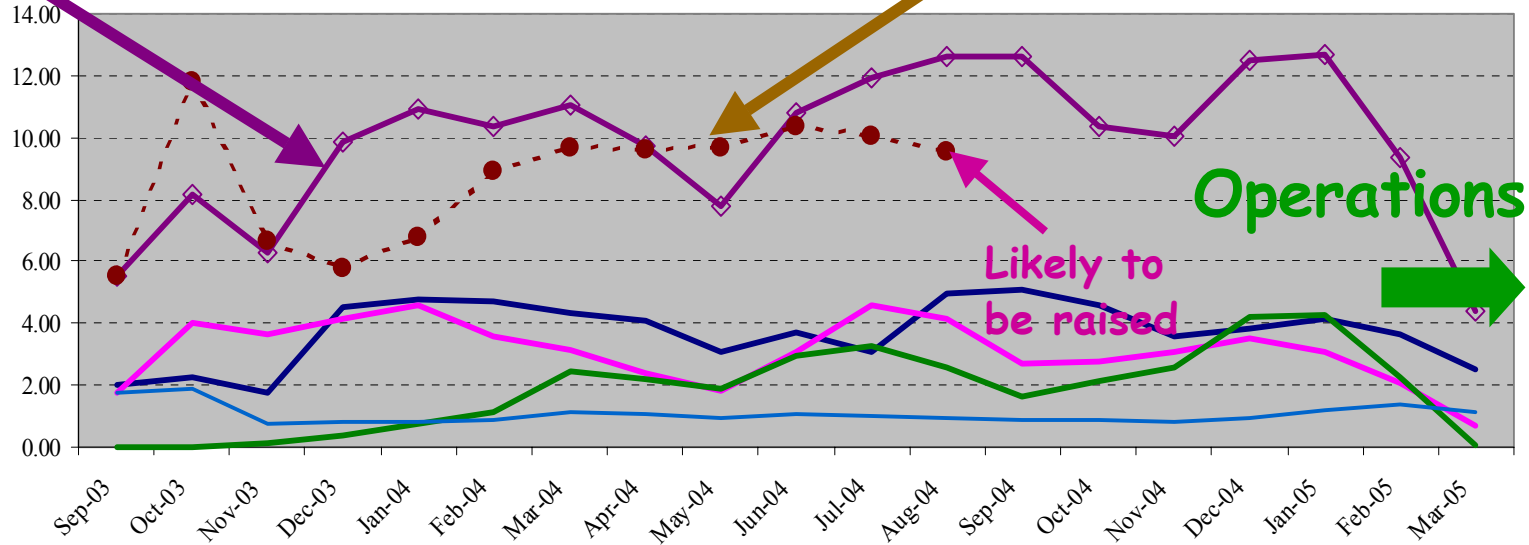

RECENT UPDATE

FTE Required

TBPM Estimated FTE Month Needed

FTE worked

FTE month:

Months

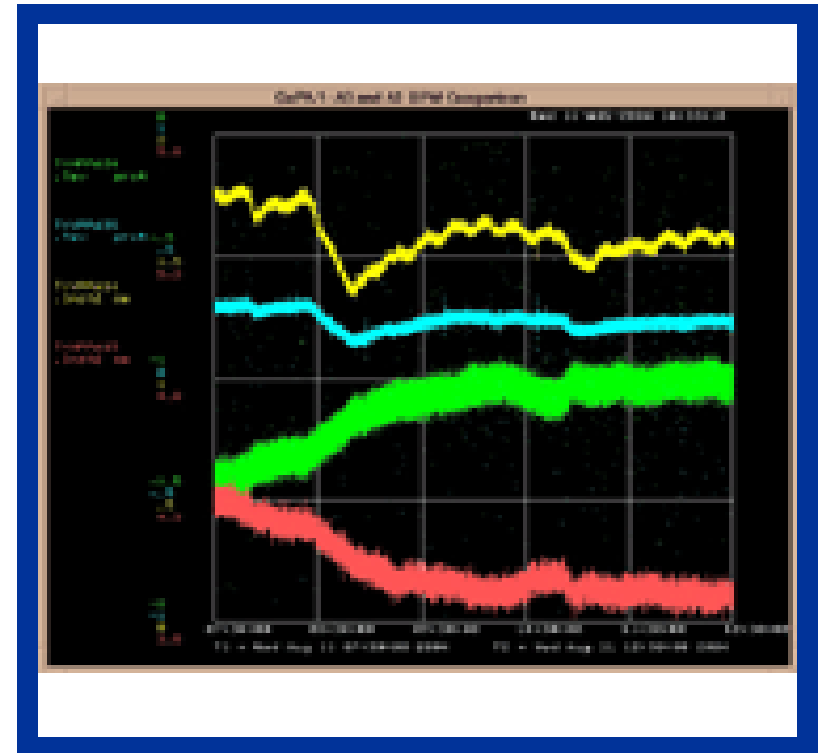

FTE by Division

TBPM FTE Need By Division

Recent Accomplishments

- Measurements in the Beam, prior to the shutdown. Huge success!

September 21, 2004

Stephen Wolbers
CD Briefing: Tev BPM Upgrade

Recent Accomplishments

- **Echotek Boards:**
 - Modified Boards arrived August 20, 2004
 - Second iteration, first iteration in June
 - Validated September 3, 2004.
 - Order and final paperwork went to Echotek September 7, 2004.
 - Big Step: 150 boards, >\$1M, heart of the system.
 - Many people pitched in and made this possible.
 - Need a plan to tag, track, test, install, all 150 boards.
 - Delivery Schedule is now known: All boards expected by early November!

Recent Accomplishments

- **Timing Board:**
 - 5 Prototypes are being built.
 - Debugged and ready for production.
 - Some (~10) extra boards may be built for the transfer line BPMs.
 - Simpler version of the board.
 - Need to build, test, install 31 boards (+ a few spares).

Recent Accomplishments

- Filters

- Filters are arriving!
- Need to test (all or some random sample)
- 1200 filters total

- Filter Boards

- Ready for production
- Will need to test 150 boards

Recent Accomplishments

- Prototypes/test stands
 - Upgrading/building as many teststands as necessary.
- Service Building preparation
 - Final cable moves and extensions will occur during the shutdown.
 - B0 and D0 BPMs are somewhat different
 - This requires some coordination with Tevatron Dept and CDF/D0.
- Purchases
 - Close to the end on major purchases.

Schedule

- Shutdown

- Plan to install many of the 27 crates during the shutdown.
- There is space in the racks.
- We have VME crates, MVME processors, filters. Plan to have timing boards, cables, most filter boards, Echotek boards, panels.
- We will make adjustments and will probably finish installation after the shutdown ends.

Schedule

- **Commissioning**

- The system will be commissioned house by house after the beam returns in late November, 2004.
- Can't commission during the shutdown- the accelerator needs the old BPM system to bring up the beam.

Schedule

- End of Project
 - Commission the full system.
 - Document and hand over to operations.
 - Formal close-outs are planned.
 - MOU's to specify the long-term operation.
 - Hardware (in CD/AD for final comment)
 - Software (close to CD/AD for comment)
 - The long-term support is not part of the project.

Issues

- **Deliveries**
 - Hardware deliveries are in some cases running late. We need to adjust our planning for installation and commissioning.
- **Echotek/front-end/online processing**
 - We are working on a "baseline" for the system for commissioning. Still some thinking/simulation/test stand work required.
 - Antiproton measurements are also an issue.
 - Gustavo Cancelo and Eric James are both helping to address the issue.
 - The number of Echotek boards that are needed by the project may be affected by the final processing scheme.

Issues

- **People**

- **The project needs about 10 FTE through March, 2004.**
 - Technicians
 - Computer Professionals
 - Engineers
 - Physicists
- **After March - will need to define the end of the project and transfer effort to operations.**
 - Not sure how many FTE that will be.
 - The MOUs are meant to cover this as this is a CD/AD operational issue.

Issues

- Other projects
 - Transfer line BPM
 - Will use same Echotek boards
 - Makes sense to test them in CD
 - Will use a variant of the timing board
 - Still working out the details
 - VME crates - using the same crates
 - MI BPM
 - Same Echotek boards
 - See Bob's talk for other issues.

Summary

- The Tevatron BPM Upgrade is moving forward thanks to the hard and dedicated work of many people in CD and AD.
- We have reached an exciting part of the project where we integrate and commission the system.
- The plan is to finish in early 2005.
