Subject: Re: Old QA Procedures

John,

I agree that the procedures can be declared as obsolete. Please begin removing them.

Roger

Hi Roger,

While reviewing procedures in preparation for the upcoming OIO audit, I would recommend the following procedures be declared obsolete. These procedures refer to an old version of the Fermilab Quality Manual that has been superseded and the old Main Injector Program Management Plan that is also obsolete. You can review any of these procedures from the following link:

<http://www.bdnw.fnal.gov/esh/adap/index.html>

ADAP-06-0001 Accelerator Division Management Program Plan

ADAP-06-0013 Main Injector Department Management Program Plan

ADAP-06-0019 Fermilab Main Injector Project Management Program Plan

ADAP-06-0020 E/E Support Department (EED) Management Program Plan in Support of the FMI Project

ADAP-06-0021 RF Support Department Management Program Plan in Support of the FMI Project

ADAP-06-0022 MSD Management Program Plan in Support of the FMI Project

ADAP-11-0002 Closure of Safety Review Recommendations to the Beams Division Head

If you concur with declaring the procedures obsolete, please reply as such and I will take care of removing them from the web and the controlled document files.

Thanks,

John
