

# RF PA Meeting

C.Y. Tan  
29 Jan 2015

# Attendees

- C.Y. Tan, R. Madrak, J. Dey and J. Reid

# Recommendations

- Recalculate model so that step up ratio is  $\sim 7$  rather than 10.
- Assume maximum power that PA gives out at  $> 76$  MHz is 100 kW
  - This should be tested in a test stand to see what the actual power is.
  - Unknown territory despite tube being spec'ed up to 108 MHz.
- Get PA transmission line model.
